DEVELOP *like a girl*

ADVANCED KIT / LEARN

Your project workbook

Turn an idea into
a useful first project.

The idea

Who it's for

First useful result

05

Project brief worksheet

Status: Draft / Accepted

Project: _____

Owner and date: _____

Kit: Advanced

The useful outcome

Who is this for? _____

What can they do when the first version works? _____

What problem or current workaround does this address? _____

What evidence supports that need? _____

First-version scope

Essential behavior: _____

Manual for now: _____

Deferred ideas and the reason: _____

Explicitly excluded: _____

Time or budget constraint: _____

Experience and ownership

Starting point, action, and visible result: _____

Who may see, create, change, or delete each record? _____

Empty, invalid, signed-out, denied, and failed states: _____

Approved content and brand assets: _____

Decisions and acceptance

Selected stack and existing project conventions: _____

First task and affected area: _____

How we will check it works: _____

Biggest unknown and next way to resolve it: _____

Accepted by, date, and exact scope: _____

Use facts from the project and mark assumptions. Acceptance of a brief does not establish that implementation or verification has happened.

Task handoff worksheet

Task: _____

Owner and date: _____

Status: Proposed / Accepted / In progress / Complete / Blocked

Scope

Accepted outcome and source brief: _____

Files or surfaces in scope: _____

Behavior and unrelated work to preserve: _____

Dependencies or shared decisions: _____

Implementation and proof

Implementation Playbook or owner: _____

Success case and required failure cases: _____

Required checks and who can run them: _____

Actual changed paths: _____

Actual check results and candidate/version: _____

Handoff

Accepted decisions: _____

Remaining work and blockers: _____

One next task: _____

External actions authorized, target, and limits: _____

Keep proposed, saved, tested, and released states separate. A future session should be able to identify the next task without reconstructing the conversation.

Release checklist worksheet

Change and owner: _____

Candidate/version and date: _____

Accepted brief: _____

Evidence to collect

[ ] Complete change inventory, including relevant untracked files.

[ ] Required behavior checked against the accepted scope.

[ ] Relevant invalid-input, denied-access, and failure cases checked.

[ ] Actual automated and browser results recorded where applicable.

[ ] Security review completed for this candidate.

[ ] Quality review completed after security for the same candidate.

[ ] Dependency evidence current enough for the required scope.

[ ] Repository evidence reviewed and limitations identified.

[ ] Blocking findings resolved with evidence for the updated candidate.

Evidence locations and unrun checks: _____

Owner decision

Ready Check result and unresolved limits: _____

Release target and operator: _____

Rollback approach: _____

Specific action approved, by whom, and when: _____

After an authorized release

Released version and time: _____

Actual target verification: _____

Project Notebook update: _____

A checked box is a prompt to record evidence. It is not proof on its own, and this worksheet does not execute or authorize a release.
